Full stack engineer with **4+ years** building scalable, high-performance web products with React, TypeScript, Python/FastAPI and GCP. At **CustomerLabs** I build the first-party data platform end to end: a new TikTok source from React UI to Pub/Sub pipeline, a tracker migration across **300+ client sites** with zero data loss, and the Morning Coffee analytics dashboard.

WORK EXPERIENCE

CustomerLabs | Associate Software Engineer, Full Stack

First-party data platform (CDP) for ecommerce and lead-gen brands · React, FastAPI, GCP

2026 - Present

- **Sources & Pipelines**
  - Built and released the TikTok Lead Forms source end to end: React configuration UI, FastAPI APIs and the Cloud Functions / Pub/Sub ingestion workflow. Adopted by 10+ clients.
  - Owned the AppBrew (Shopify mobile-app builder) tracker from design to release: event schema, ingestion endpoints and GCP processing, live with the first 2 brands.
- **Tracker & CDN**
  - Drove the migration of the first-party website tracker from v1 to v2 across 300+ live client sites, preserving every event schema with zero data loss during cutover.
  - Moved vendor script loading onto CustomerLabs' own CDN host, improving caching, load reliability and resilience to tracking restrictions.
- **Frontend & Analytics**
  - Built the full frontend of Morning Coffee, an in-app analytics dashboard unifying Google Ads, Meta Ads and Shopify metrics into one daily snapshot with reusable chart components.
  - Rebuilt the Audiences UI for v2 in React without disrupting client workflows; built the Astro marketing site and webinar pages (97 Lighthouse performance, 100 SEO).

Impact: 10+ clients on the new source, 300+ sites migrated with zero data loss, 25+ production tickets resolved.

Jeeva AI | Senior Frontend Developer

AI-powered CRM and lead generation platform with data provider integrations and AI playbooks

2025 - 2026

- **Performance & Scale**
  - Led critical frontend features end to end, improving application performance by 35% with code splitting, lazy loading and memoization.
  - Virtualized large datasets with react-window and integrated third-party data platforms through secure iframe communication.
  - Handled AWS S3 and EC2 assets and deployments with DevOps; added Jest unit tests that cut production regressions.

Trustt (formerly Novopay) | Frontend Developer

Loan management system for HDFC Bank's NBFC lending platform: foreclosure, part-payment and repayment flows

2022 - 2025

- **Fintech Frontends & Architecture**
  - Built and scaled high-traffic fintech frontends with React, Redux Toolkit and TypeScript; optimised load times with caching, storage and rendering strategies.
  - Designed the reusable component architecture other teams built on; led code reviews and mentored junior developers.

ROLE-RELEVANT EXPERTISE

Frontend

React · TypeScript · Redux Toolkit · Tailwind CSS · Astro · HTML / CSS / JS

Backend & cloud

Python, FastAPI, Node.js, REST APIs
GCP Cloud Functions, Pub/Sub, Workflows
Event-driven ingestion pipelines · AWS S3, EC2

Tracking & data platform

First-party tracking scripts on 300+ sites
CDN script delivery, versioned migrations
Audience segmentation and sync
TikTok, Meta, Google Ads, Shopify integrations

Performance & architecture

Code splitting, lazy loading, memoization
Virtualization for large datasets
Core Web Vitals, Lighthouse tuning
Reusable component systems

Quality & tooling

Jest unit testing, code reviews
Git, Vite, Webpack, ESLint, CI/CD

EDUCATION

B.E. Electronics & Communication

Karpagam College of Engineering
Coimbatore, 2016-2020 · CGPA 7.6

CERTIFICATIONS

Fellowship in Software Development, 2025
Full stack track

Programming with JavaScript, 2024
Meta

Web Development Bootcamp, 2023
Udemy
